1991 Mathematics Subject Classification

1991 Mathematics Subject Classification (MSC)

This is a corrected reprint of the 1991 MSC, which has been in use at MR starting with the January 1991 issue. The 1991 MSC was first printed in the Annual Index for 1990. Corrections and additions since then include the following: 11M36, 14J32, 17B69 and 53Z05 are new. Subsection 11Z50 has been relabeled 11Z05 and 73P05 has been relabeled 73P20. There are several entries in section 17 in which there have been small changes or additions in the description.

Instructions for using the 1991 Mathematics Subject Classification

These instructions apply uniformly to all fields listed. The main purpose of the classification is to help readers to find the items of present or potential interest to them as readily as possible—in MR, in Zbl, or anywhere else where this classification system is used. The review of a paper or book should be printed in the section where it will receive the broadest attention from all readers possibly interested in it—these include both people working in that area and people who are familiar with that area and apply its results and methods elsewhere (inside or outside of mathematics). It will be extremely useful for both readers and classifiers to familiarize themselves with the entire classification system and thus to become aware of all the classifications of possible interest to them.

Every paper or book reviewed in MR receives precisely one "primary" classification number, which is simply the number of the section in which the review of the item will be printed. This section should be the one that covers the principal contribution.

When a paper contains several principal contributions in different areas, the primary classification should cover the "most important" among them. A paper or book may receive one or several "secondary" classification numbers (or "cross-references") to cover any remaining principal contributions, ancillary results, motivation or origin of the problems discussed, intended or potential field of application, or other significant aspects worthy of notice.

The "primary" principal contribution is meant to be the one including the most important part of the work actually done in the paper. For example, a paper whose main overall content is the solution of a problem in graph theory, which arose in computer science and whose solution is (perhaps) at present only of interest to computer scientists, belongs primarily in 05C with a cross-reference in 68; conversely, a paper whose overall content lies mainly in computer science should receive a primary classification in 68, even if it makes heavy use of graph theory and proves several new graph-theoretic results along the way.

For an item with its primary classification in an "applied" section (68 through 94), it is recommended that a cross-reference be given to any "pure" mathematics section (00 through 65) to which the item being classified makes a contribution.

There are two types of cross-references given after many classifications in the list. The first type is of the form "[For A, see X]"; if this appears in section Y, it means that for contributions described by A one should usually assign the classification X, not Y. The other type of cross-reference merely points out related classifications; it is of the form "[See also ...]", "[See mainly ...]", etc., and the classifications listed in the brackets may, but need not, be added to the classification of a paper, or they may be used in place of the classification where the cross-reference is given. The classifier will have to judge which classification is the most appropriate for the paper at hand.

 93C90 Random disturbances in control systems
 93C95 Applications of control theory
 93C99 None of the above, but in this section
93Dxx Stability
 93D05 Lyapunov and other classical stabilities (Lagrange, Poisson, L^p , l^p , etc.)
 93D09 Robust stability
 93D10 Popov-type stability of feedback systems
 93D15 Stabilization of systems by feedback
 93D20 Asymptotic stability
 93D21 Adaptive and robust stabilization
 93D22 Interrelations between stability problems and optimization problems
 93D25 Input-output approaches
 93D30 Scalar and vector Lyapunov functions
 93D99 None of the above, but in this section
93Exx Stochastic systems and control
 93E03 Stochastic systems, general
 93E05 Stochastic games, stochastic differential games [See also 90D15]
 93E10 Estimation and detection [See also 60G35]
 93E11 Filtering [See also 60G35]
 93E12 System identification
 93E14 Data smoothing
 93E15 Stochastic stability
 93E20 Optimal stochastic control
 93E23 Stochastic gradient methods
 93E24 Least squares and related methods
 93E25 Other computational methods
 93E30 Computer simulations of stochastic systems
 93E35 Stochastic learning and adaptive control
 93E99 None of the above, but in this section
94-XX INFORMATION AND COMMUNICATION, CIRCUITS
 94-00 General reference works (handbooks, dictionaries, bibliographies, etc.)
 94-01 Instructional exposition (textbooks, tutorial papers, etc.)
 94-02 Research exposition (monographs, survey articles)
 94-03 Historical (must also be assigned at least one classification number from Section 01)
 94-04 Explicit machine computation and programs (not the theory of computation or programming)
 94-06 Proceedings, conferences, collections, etc.
94Axx Communication, information
 94A05 Communication theory [See also 60G35, 90B12]
 94A11 Application of orthogonal functions in communication
 94A12 Signal theory (characterization, reconstruction, etc.)
 94A13 Detection theory
 94A14 Modulation and demodulation
 94A15 Information theory, general [See also 62B10]
 94A17 Measures of information, entropy
 94A24 Coding theorems (Shannon theory)
 94A29 Source coding
 94A34 Rate-distortion theory
 94A40 Channel models
 94A45 Prefix, length-variable, comma-free codes [See also 20M35, 68Q45]
 94A50 Theory of questionnaires
 94A55 Shift register sequences
 94A60 Cryptography [See also 11T71, 68P25]
 94A99 None of the above, but in this section
94Bxx Theory of error-correcting codes
 94B05 Linear codes, general
 94B10 Convolutional codes
 94B12 Combined modulation schemes (including trellis codes)
 94B15 Cyclic codes
 94B20 Burst-correcting codes
 94B25 Combinatorial codes
 94B27 Geometric methods (including applications of algebraic geometry) [See also 11T71]
 94B30 Majority codes
 94B35 Decoding
 94B40 Arithmetic codes [See also 11T71]
 94B50 Synchronization error-correcting codes
 94B60 Other types of codes
 94B65 Bounds on codes
 94B70 Error probability
 94B75 Applications of the theory of convex sets and geometry of numbers (covering radius, etc.) [See also 11H31]
 94B99 None of the above, but in this section
94Cxx Circuits, networks
 94C05 Analytic circuit theory
 94C10 Switching theory, application of Boolean algebra; Boolean functions [See also 06E30]
 94C12 Fault detection; testing
 94C15 Applications of graph theory [See also 05Cxx, 68R10]
 94C30 Applications of design theory [See also 05Bxx]
 94C99 None of the above, but in this section
94D05 Fuzzy sets and logic (in connection with questions of Section 94)
 [See also 03B52, 03E72, 04A72, 28E10]
